

Worksheet

Sustainable Homes

1. When we build a house, we use large quantities of materials like wood and concrete.

What will the environment-friendly and sustainable homes needed in the coming age be like?

Let's create an image map linking all the aspects we can think of, such as materials, building methods, uses, and equipment.

2. Let's form a group and show each other our image maps. (It's OK to add other people's ideas to your own image map.)
3. What will the homes oriented to an environment-friendly and sustainable society be like? After coordinating the opinions of the group members and searching the Internet and home builders' pamphlets, etc., report on what kinds of homes are being built now.

4. In the future, what kind of house would you like to live in?

Reviewing what we have learned

Looking back on today's lesson, summarize what you have learned, what you noticed for the first time, and how you would like to make use of it in future lessons.
